RoHS Compliance Notice

ATC offers "RoHS" compliant equivalents of its entire product line.

The termination style designation for Pure Tin termination finishes on ATC multilayer chip capacitors is "T". The non-magnetic equivalent termination style code is "TN".

For customers requiring RoHS compliant lead-free termination finishes and cannot tolerate pure tin, ATC offers the gold finish or "CA" termination style.

ATC capacitors, leaded capacitors, capacitor assemblies, resistor and inductor products are all RoHS compliant.

ATC, as a supplier to the Military/Aerospace Industries, complies with the requirements of Military and Aerospace customers and will maintain product offerings that meet the demand of these industries. ATC MLC termination style "W" will satisfy the termination finish requirements of its Military/Aerospace customers.

Sincerely,

AMERICAN TECHNICAL CERAMICS CORP.
